

- Immediate results
- Lasts up to twice as long as collagen
- Over 1.5 million treatments performed
- Excellent safety profile- no allergy testing required
- Quick, convenient in-office procedure with no recovery time

# RESTYLANE

ACCENTS COSMETIC SURGERY AND MEDICAL SPA  
ACCENTUATE YOUR NATURAL BEAUTY.

**Q** What is RESTYLANE and why would you want to use it?

Restylane is a cosmetic enhancing product used for wrinkle correction. It is a safe and natural dermal filler that restores volume and fullness to the skin to correct moderate to deep facial wrinkles, creases and folds.

It is the first and only filler made of non-animal based hyaluronic acid.

- Hyaluronic acid is a substance in the body used to provide volume and fullness to the skin.
- Restylane's hyaluronic acid is in a crystal-clear gel that is entirely biocompatible with human hyaluronic acid... meaning the body isn't likely to have the risk of allergic reaction caused by other fillers.

**Q** Is Restylane considered safe?

Restylane is safe—in fact so safe that it is the first hyaluronic acid wrinkle filler to receive FDA-approval. Since 1996, dermatologists and plastic surgeons worldwide have treated their patients with Restylane.

Side effects are rare and few have been reported, including only temporary redness and mild swelling at the treatment site. *From our experiences, swelling is common following lip augmentation but typically resolves on its own within 2-3 days.*

**Q** Do Restylane treatments hurt?

Patients typically tolerate Restylane quite well—especially after we place a numbing cream on the skin prior to treatment. When plumping up thin lips or the lines around the mouth, patients are offered a local anesthetic (similar to that used by a dentist). Following treatment, patients rarely report any discomfort.
