

Before (top photo) and just 1 Month After

"It's wonderful. I wanted to have more tightness in my skin around my cheek area and eyes. The procedure (Thermage) was really wonderful. The preparation was very good and Dr. Berkowitz is awesome at what he does. I have seen tremendous results. It was non-invasive—no cutting, no needles, no surgery, nothing. I liked the fact that I could just come in, get it done, and go home. It didn't interfere with my daily routine."

What is the Thermage procedure?

Thermage was the first FDA-approved, non-surgical procedure proven to tighten loose skin. Because there is no surgery involved, minimal downtime is required and you should return to normal activities within just a few hours after treatment.

How long has Thermage been available?

Thermage first received FDA-approval in 2002 for treatment of wrinkles around the eyes. We have been treating patients, family and friends with Thermage since it was approved for full face treatment in mid-2004. Since then, Thermage is now used to treat the upper eyelids, tummy, thighs, upper arms and more! Treatment results are remarkable.

How does Thermage work?

Thermage has a treatment hand-piece with a smooth, flat tip that touches the skin and delivers safe, radio-frequency energy (in the form of heat) deep into the skin. This causes the skin's collagen to immediately tighten and allows new collagen to form from its stimulation, which results in additional tightening over time.

Is Thermage safe?

Thermage is remarkably safe. In fact, we have the most up-to-date equipment with the most safety features currently available. Side effects are rare and do not usually require any medical attention. However, when you meet Dr. Berkowitz or one of his Medical Aestheticians, they will discuss any risk associated with this procedure.

If you're not ready for surgery, but you know you are ready for results, please consider this revolutionary treatment option now available in the comfort of our office.

Plan to attend an upcoming seminar to learn how Thermage can tighten loose skin – with virtually no downtime in just a single treatment.
